29th May 2026

Dear Hiring Manager,

I am writing to express my interest in the Junior Data Engineer role at your organization. As a motivated and detail-oriented professional with hands-on experience in Azure-based data engineering, I bring a solid foundation in data integration, ETL processes, and cloud data platforms.

During my Bachelor of Technology in Artificial Intelligence and Machine Learning at NRI Institute of Technology, I gained practical experience through my internship at LNRS Technologies as an Azure Data Engineer Intern. I worked on building and maintaining batch data pipelines using Azure Data Factory, SQL, and Python, while ensuring data quality through validation and transformation processes. I have also developed projects such as a Sales Analytics solution using Azure Databricks and SQL, implementing Medallion Architecture for efficient data processing, and an ADF pipeline for migrating on-premises data to Azure Blob Storage. My exposure to Azure Data Lake, Blob Storage, PySpark, and Power BI has strengthened my ability to handle modern data engineering workflows.

I am confident in my ability to contribute effectively to your team through my strong analytical thinking, problem-solving skills, and eagerness to learn new technologies. I am passionate about data engineering and excited to apply my skills to build scalable, reliable, and impactful data solutions in a professional environment.

Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to your team.

Sincerely,

Gummadi Varshini
